SENSITRUST

The next-gen job marketplace based on AI and Blockchain

Plan your projects, make your deals, realize your dreams

Many real-life sectors are affected by several types of inefficiencies in their processes, deriving from the adoption of traditional and non-optimal practices. In the job market, finding the most appropriate job according to personal skills may be difficult. On the other hand, companies often need to do a lot of research and interviews before finding the right person able to face effectively and efficiently the challenges raised by the specific tasks to perform.

Sensitrust will exploit blockchain technologies to develop an innovative platform that will positively impact and solve many of the existing issues in the job market. Every aspect of the involved processes will be fully governed by Smart Contracts, in a **decentralized**, **immutable**, and **certified** manner.

What is Sensitrust?

A Decentralized Job Marketplace
Sensitrust will help people to establish and grow a professional network, to easily find providers of products and services of interest, or to design single activities and whole projects that will be realized by a team of experts.

Regulated by Smart Contracts
All the activities performed in the platform will be regulated by Smart Contracts: agreements, quality and temporal constraints, checkpoints and multiple revisions will be governed, in a decentralized, immutable and certified manner.

A place to Learn and Grow
The professional growth of people is one of our main goals. Trainees will gain access to learning resources, online courses, and opportunities to contribute to real activities and projects. Their effort will be truly recognized and rewarded!

Supported by Artificial Intelligence
Identifying the most promising opportunities and professionals, reviewing products and services, and filling specifications will be much easier, thanks to the support provided by sophisticated Artificial Intelligence techniques.

Platform Models

Seeking for a professional?
Define requirements and constraints of a product or of a service and **hire a professional** from the Sensitrust catalogue. A smart contract will keep the agreed **compensation locked and safe until** you and a team of expert reviewers approve the result positively.

Seeking for a job opportunity?
Candidate yourself to calls for action, activities and projects. Find an agreement about the requirements of the product/service that you will provide, as well as of the constraints to be satisfied. Provide a **high-quality service**, get rewarded and be officially recognized!

Proof of Result
With Sensitrust, both customers and professionals are protected, through a decentralized consensus model strongly based on the quality of the result: **hard-coded constraints**, **decentralized validation** based on multiple revisions, and **code-governed unlock** of the compensation.

Short Roadmap

Q1 2019
Conceptualization of the project

Q1-Q2 2020
Private Presale & Public Sale

Q3-Q4 2020
Development of MVP

Q1-Q3 2021
Public release of basic functionalities

Q1 2022
Advanced AI functionalities

Q2-Q4 2022
Development of specific sub-platforms

Presale price: 0.05€ / SETS

Public sale price: 0.08€ / SETS

BUY SETS TOKENS WITH BTC, ETH, LTC, TRX and FIAT
